

LinkaOnline Newsletter

Edition 2

Here is our second newsletter update from [Linkaonline](#), the dedicated website for model enthusiasts. since the first newsletter went out there have been many additions and changes, here are a few of the highlights

If you missed the first newsletter you can see it here in the [archives](#)

We have seen many more members joining the newsletter this month and steadily the site is growing, more of you are sharing great information and I have a host of new content, models and updates to put up on the site, so please keep visiting often.

I also added a new [LATEST](#) section to the site so you can see at a glance where the new stuff is and what its about

So Here is some news on whats been going on

Lots more of your Models on the [gallery](#) and new [workshops](#), [step by steps](#) and [Videos](#) as well as great articles on [painting and effects](#)

Lots of Members are also sending me their fantastic model pictures and I am adding them as quickly as I can. So please keep them coming, they don't

need to be the best in the world I am sure we all have a few that did not quite go the way they were supposed to, so that's fine, share your experiences and help others see it takes practice. but with practice comes great results

Photo images, top left Robs great canal project takes shape, top right Alan's new model as featured in the gallery.

The BRAND NEW Re - Introduced plastic moulds have arrived, and I am discussing with LinkaWorld introducing even more back on the market so will keep you all posted.

Young People Using Linka

When Ria asked if I could help with a new school project we found a great old 1800 building that used to be in our town, the Wednesbury market place. so we decided to build it from Linka, Here is Ria working away on this great project. You can see it take shape online [here](#)

There is a host of new products due on the shop, I hope by the time your reading this I have put them all on, from **BRAND New Re Introduced Plastic Moulds** to **New Compatible**

Components as well as all the **Rubber moulds**, new and used

This is the new [members shop](#)

Thanks to our friends at New Model Railway for the fantastic article they did. See it [here](#)

Linka revival update, I have been very busy posting to Facebook, Twitter, Pinterest and a host of other sites and blogs, the result is that Linkaonline is getting more coverage, more website visitors, more forum members and finally we got on the first page of google so enthusiasts can find us easily. Not bad for 5 months work I think.

Step By Step

New content is being added to the step by step building area all the time, this is the Cottages build and is almost complete, just the painting to finish

See Whats New [Here](#)

I have also added a new area named **[MEMBERS GALLERIES](#)**, as there has been so much content it really was a matter of where to put it all, so what better than a special area where members can send in their content and it can be added to their

own dedicated areas, its not perfect yet but its in development and there is a host of content coming here soon, if you wish to have your own area just contact me on the website and I will sort it out for you. the more the merrier I say.

Robs New paint workshop - Update

A whole new series of articles are being produced for the website thanks to Rob Tossen, there are now 4 main features on the website by the time your reading this I may have the 5th one on that Rob has sent me through this week. It will be a great set of articles and will help you all get some fantastic results.

See Robs Great Articles [Here](#)

Linka Down Under

As many of you may already know, there is a following of model making and model railways in Australia. And the new compatible components are being made right there, the first set of components are now in the UK. We are trying to find all the Linka Enthusiasts in Aus so have a new facebook page [Here](#)

Just some of the new compatible products as shown here with their product numbers

Thanks to Tony for all the hard work he is putting in designing and creating all the new components

Tony writes

In the land down under I am currently designing many new products and will be sharing them on the Linkatech AU Facebook site for review, the more you like the more products will be developed, your feedback is very important so we can create what you want the most.

Our [YouTube Channel](#) is taking shape, we now have 6 videos in the series, and many more are planned, so why not watch them on the website or you can subscribe to the YouTube channel and then receive a notification as soon as more become available

Forum

Because the new components are now coming on line we would love your

feedback and would love to know what component you would like, so here is the [topic on the forum](#), please let us know what you want the most and we will see what we can do

Each Month I post a featured model in the Gallery

for March the decision has not been made yet so if you have a finished great contender please upload it for us all to see and it may make the March Featured model. but at worst it will be in the gallery and help other members see what we can be achieved.

[February's Featured model - By Sarah](#)

What's NEXT

Well that's all there is room for in this second edition, but there is so much more to come, look out in the next edition for **More New components, new designs, new building plans**, and a host of other news. I expect the next newsletter to be ready in a week or two.

Thanks and keep building everyone.
