

LinkaOnline Newsletter

Edition 1

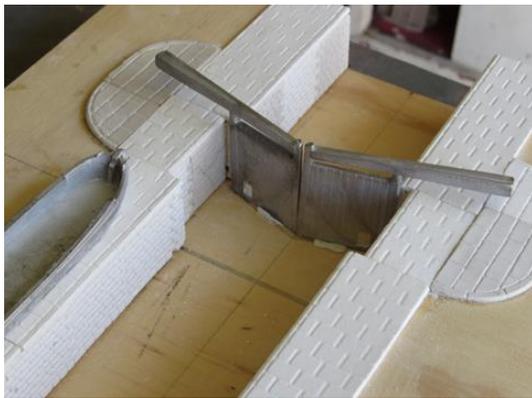

This is the very first newsletter update from [Linkaonline](#), the dedicated website for model enthusiasts. it has just been shy of 4 months since I started the website. since then its been a crazy journey.

The website is now bringing all the model building enthusiasts together and slowly but surely the audience is growing so I hope you will all like the very first newsletter

So Here is some news on whats been going on

I have been adding more Models on the gallery to give you some inspiration with your own model making.

Lots of Members are also sending me their fantastic model pictures and I am adding them as quickly as I can. So please keep them coming, they don't need to be the best in the world I am sure we all have a few that did not quite go the way they were supposed to, so that's fine, share your experiences and help others see it takes practice.

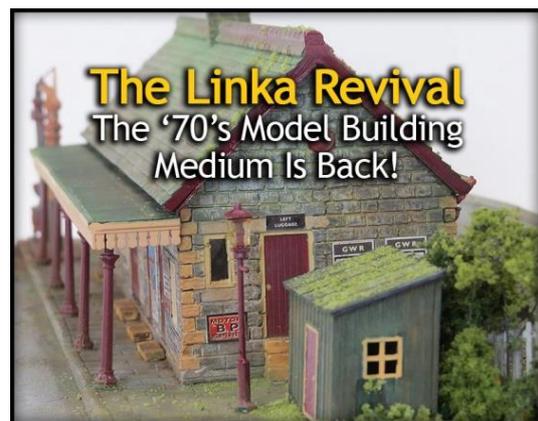

New Build Workshops

There are many more new build workshops coming online including this new Canal build by Rob, check them out on the website as they are being updated and added all the time.

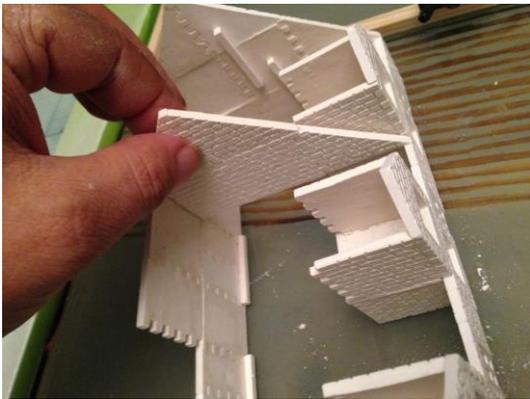

The online shop finally opened, we now have moulds and plenty of stuff you may like, at the best prices in the UK and will be working on adding more new products as soon as they are available. There are also a pile of rare plastic moulds going on the site so keep an eye out.

Thanks to our friends at New Model Railway for the fantastic article they did. See it [here](#)

This is the new [members shop](#)

Linka revival? Well it has a nice ring to it don't you think, Linka has been around many years, I had a set when I was just a boy, that's a long long time ago. But I think it really needed a revival and some marketing to bring new people into the hobby, so that's why I built the website so we can all share our stuff.

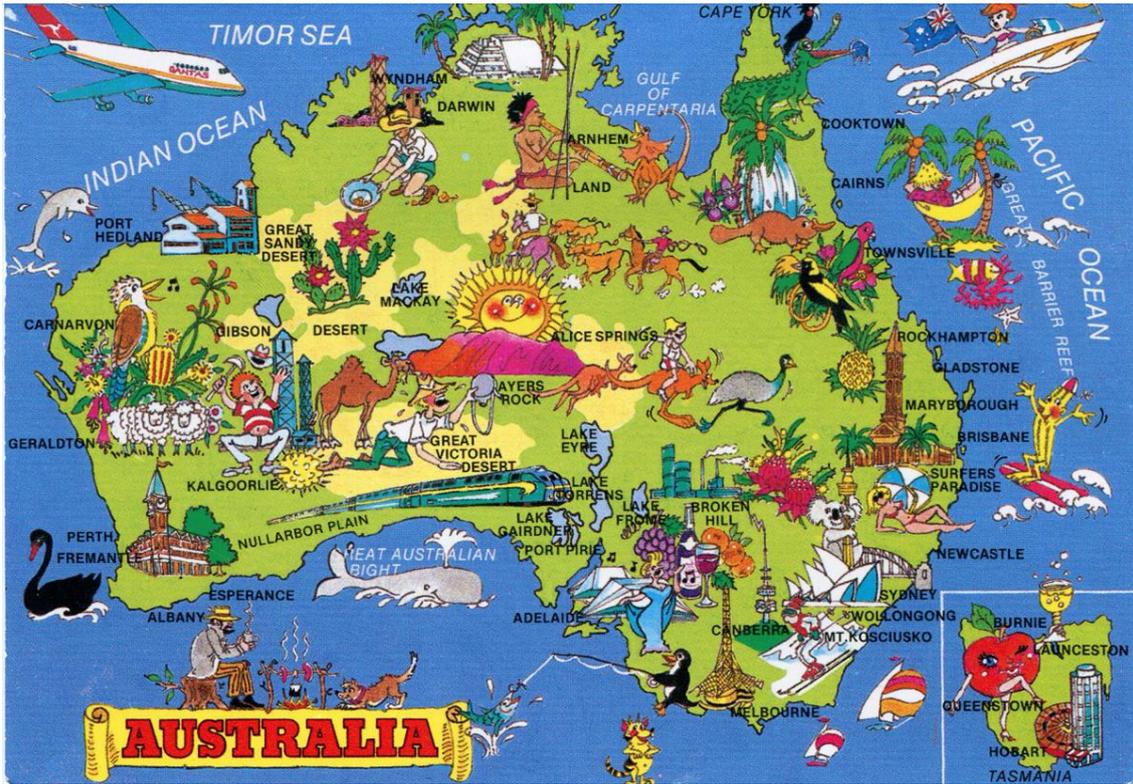

Step By Step

New content is being added to the step by step building area all the time, this is the Cottages build and is almost complete, the roof is going on and it's going to be shown as a video on the new YouTube channel

New paint workshop

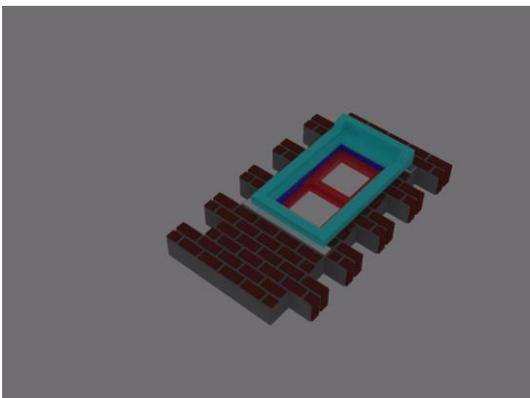

A whole new series of articles are being produced for the website thanks to one of the members, the first one is complete and should be on the website by the time your reading this. It will be a great set of articles and will help you all get some fantastic results.

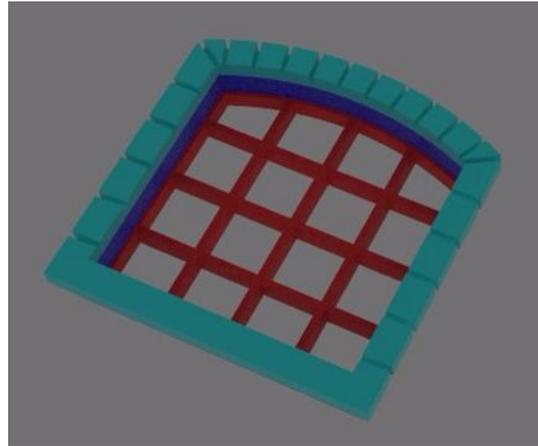

Linka Down Under

As many of you may already know, there is a following of model making and model railways in Australia. In fact the best new content has come from people who live there, ok so they were born in the UK, well most of them, so it stands to reason I and a few great members, who may I add are turning into great friends, should get the word out. So we have started a new Facebook page dedicated to Aus and are planning a website to get goods there as the prices for shipping from the UK are expensive. [Here is the Facebook page for Linkatech Aus](#)

New components are being designed

so you will be able to add them to your models, these are currently 3D designs that are being output using the latest 3D printing technologies, still working on the details but massive progress is being made

There is so much going on and it is very exciting, it will bring a whole new world of possibilities to our model making. Thanks to Tony from Australia for all his tireless hard work.

Tony writes

In the land down under I am currently designing 2 new buildings and lots of associated detailing parts using 3D cad models which includes a full set of Linka tiles which are used to build the models. Various pictures are on the website and the Aus Linka Facebook page.

The prototype plastic parts are being made on a 3D printer, so parts can be tried to see how they will look on the finished model.

If you can think of any parts you would like to see become available please make contact and we can have a look at it. For Linka to grow and become popular again we need your input as to what is needed.

What's NEXT

Well that's all there is room for in this first edition, but there is so much more to come, look out in the next edition for **New components, new designs, new building plans**, and a host of other news. I expect the next newsletter to be ready in a week or two. Thanks and keep building everyone.
